

SALEH BAGOMRI

Kotlin & Android Developer

Yemen | +967 770 727 055 | s.bagomri@gmail.com

Portfolio: bagomri.com • GitHub: github.com/salehbagomri • LinkedIn: linkedin.com/in/salehbagomri

PROFESSIONAL SUMMARY

Android developer building native, clean-architecture mobile applications with Kotlin and Jetpack Compose, with production experience across Flutter and Firebase/Supabase-backed systems. Deliberately transitioning from cross-platform development to native Android to deliver top-tier performance and native UX. Works independently end-to-end — from architecture through Play Store release — across a growing portfolio of shipped apps. 2024 graduate in Information Technology, fast learner, seeking to bring that independent shipping speed to a collaborative engineering team.

TECHNICAL SKILLS

- Languages:** Kotlin, Dart, Java, SQL, HTML5/CSS3, JavaScript
- Android Stack:** Jetpack Compose, Android SDK, Material 3, ViewModels, LiveData/StateFlow
- Architecture & Patterns:** MVVM, Clean Architecture, Repository Pattern, BLoC/Cubit, Dependency Injection (Hilt/Koin)
- Async & Networking:** Kotlin Coroutines, Flow, Retrofit, OkHttp, REST APIs
- Local Storage:** Room Database, DataStore, Hive, SQLite
- Cloud & BaaS:** Firebase (Auth, Realtime Database, Firestore, Cloud Messaging), Supabase (Postgres, Auth, Realtime, Row-Level Security)
- Cross-Platform:** Flutter (Dart), State Management (Riverpod/BLoC/Provider)
- Tools:** Android Studio, Git, GitHub, Postman, Figma, CI/CD

KEY PROJECTS

FajrLoop (حلقة الفجر) — Native Android App

Tech Stack: Kotlin (Native), Firebase Realtime Database, Firebase Cloud Messaging, TOTP

- Built a social accountability app that helps users wake up for the Fajr prayer through circular alarm chains ("halqas"), where members in a group wake one another in sequence.
- Rebuilt from an initial Flutter prototype into fully native Kotlin to achieve the alarm reliability and background-execution guarantees Flutter could not provide.
- Designed multi-halqa conflict handling, Firebase Security Rules, and a GPS-based fallback for prayer-time accuracy.

GitHub: github.com/salehbagomri/fajrloop

Tamm (تم) — Home Services Mobile App

Tech Stack: Flutter, Supabase, Riverpod, GoRouter, Google Sign-In

- Built a marketplace app connecting users in Yemen with air-conditioning and solar-service providers.
- Designed a Supabase backend with a 10-table schema, Row-Level Security policies, and Realtime subscriptions.
- Implemented Google Sign-In authentication and a fully localized, RTL-first Arabic interface.

Blood Bank Management System (بنك الدم) — Mahrah & Yemen Editions

Tech Stack: Flutter, Kotlin/Jetpack Compose (in progress), Supabase

- Developed two region-specific blood-donor management apps, each backed by its own independent Supabase project.
- Diagnosed a regional ISP connectivity block affecting one deployment and resolved it by re-architecting the backend connection strategy.
- Currently migrating the Yemen edition from Flutter to native Kotlin and Jetpack Compose, while the Mahrah edition continues on Flutter.

QuickChat — *Privacy-First WhatsApp Messaging Utility*

Tech Stack: Flutter, BLoC/Cubit, Hive, shared_preferences

- Built a fully offline, privacy-first utility that lets users message any WhatsApp number without saving it as a contact — no backend, no tracking, no analytics.
- Implemented country-code selection for 195+ countries, categorized message templates, wa.me link and QR-code generation, and home-screen widgets/shortcuts.
- Localized the app into 8 languages with full Arabic RTL support; shipped with CI running automated analysis and tests on every push.

GitHub: github.com/salehbagomri/quickchat

Bagomri Developer Portfolio & Technical Blog — *Personal Site*

Tech Stack: Vanilla JS, Firebase Firestore, Cloud Hosting, SEO

- Built and deployed a personal brand website and technical blog with zero runtime framework overhead.
- Automated dynamic XML sitemap generation and Schema.org JSON-LD structured data for SEO indexing.
- Integrated multi-language support (AR/EN) and a responsive, minimalist UI.

PROFESSIONAL EXPERIENCE

Independent Software Developer (Freelance)

2024 – Present

- Design and build native Android and cross-platform mobile applications end-to-end, from architecture and UI/UX through backend integration and release.
- Ship production apps on Kotlin/Jetpack Compose and Flutter, integrating Firebase and Supabase backends.
- Own the full project lifecycle independently — requirements, design, development, testing, and deployment — across a portfolio of five shipped applications.

EDUCATION

Bachelor of Science in Information Technology

College of Computer Science and Information Technology, Hadhramaut University of Science and Technology

Graduation Year: 2024

LANGUAGES

- **Arabic:** Native
- **English:** Professional Working Proficiency
